

**Application Deep Dive:
Designing Cameras with Ansys
Optical Simulation Tools**

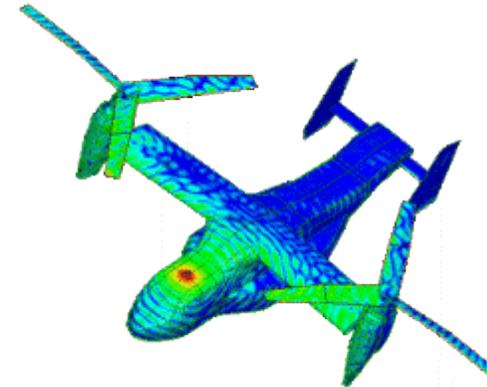

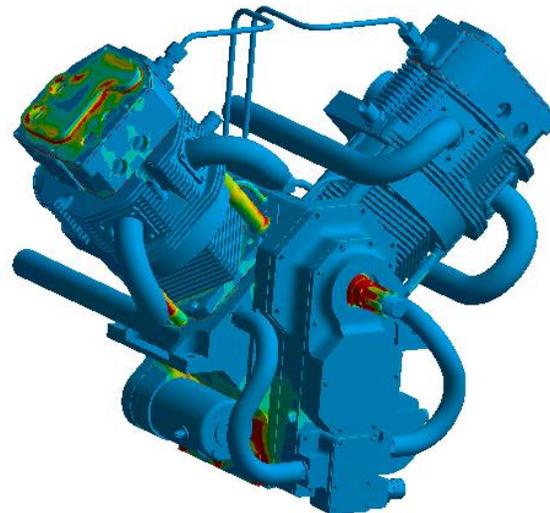

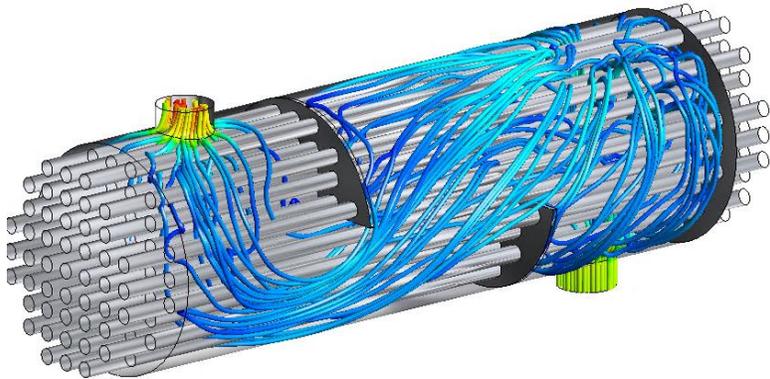

Agenda

Introduction to DRD
Evaluating Cameras using Ansys
Questions

Mission Statement

DRD Technology helps engineering teams accelerate product development. With in-house expertise spanning the entire range of physics, we ensure customers succeed when using Ansys simulation tools for virtual prototyping and design verification.

Ansys

CERTIFIED ELITE CHANNEL PARTNER

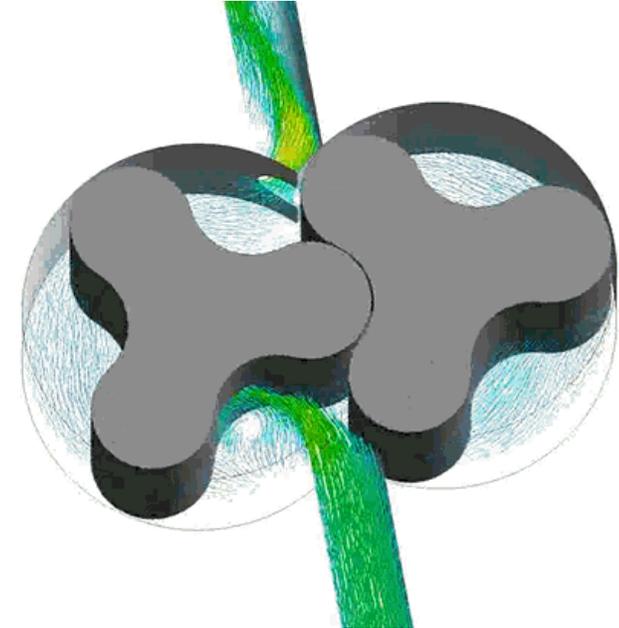

DRD History

Since 1980, DRD Technology has been focused on engineering simulation.

In 1984, DRD became an Ansys Channel Partner.

I've been working with DRD for 29 years. Working with your team has been one of the more enjoyable parts of my career. You have always been ready to help in any way.

- Rick Kunc
Sr. Research & Development Engineer

Submit a Technical Support Question

As part of DRD's customer services, we encourage you to send us questions and development requests regarding the software products we represent. The question/enhancement will be emailed immediately to the technical support personnel at DRD.

Email Address *

For more than five years, I have worked closely with DRD Technology to execute tactical and strategic initiatives here at EaglePicher due to our unprecedented growth. We've been very happy with DRD and will continue to work with them as our business partner for using Ansys tools effectively and efficiently.

*- Doug Austin
Director of Research and Development*

Ansys Software Training

Live, Virtual Courses from DRD

Structures

- Introduction to Ansys Mechanical (2 days)
- Ansys Composite Cure Simulation (1 day)
- Ansys Mechanical Nonlinear Structural Simulation (2 days)
- Ansys Mechanical Structural Dynamics (2 days)
- Ansys Mechanical Fracture Mechanics (1 day)
- Ansys Mechanical Thermal Simulation (1 day)
- Ansys Composite PrepPost (1 day)
- Ansys Topology Optimization and Metal Additive Manufacturing (1 day)
- Ansys Workbench LS-DYNA (2 days)
- Advanced Meshing for Ansys Mechanical (1 day)
- Introduction to SpaceClaim for Ansys Mechanical (1 day)
- Ansys Mechanical Fatigue Life Prediction (1/2 day)
- Ansys nCode Design Life (2 days)

System Modeling

- Introduction to Ansys Twin Builder for Mechanical Systems (1 day)

Fluids

- Introduction to Ansys CFX (2 days)
- Introduction to Ansys Fluent (2 days)
- Workbench Meshing for Ansys Fluent (1 day)
- Fault Tolerant Meshing for Underhood Thermal Modeling with Ansys CFD (1 day)
- Ansys Rocky (1 day)

Electronics

- Introduction to Ansys HFSS (2 days)
- Ansys HFSS Antenna Design (2 days)
- Ansys HFSS SBR+ Antenna Placement Design (1 day)
- Introduction to Ansys SIwave (1 day)
- Introduction to Ansys HFSS 3D Layout (2 days)
- Introduction to Ansys Maxwell (1 day)
- Ansys Maxwell Motor Modeling (1 day)
- Introduction to Ansys Icepak (2 days)

Ansys Expert Tech Corner

We hope that our website provides a great deal of valuable technical information, which is available to anyone who visits our website. The technical materials on this page, however, are intended only for DRD's customers, and are, therefore, password protected. We provide these materials to our customers as a benefit for doing business with DRD, and at our discretion we provide them to selected DRD friends and associates.

The topics on this page are intended for engineers who are interested in highly technical and detailed information on Ansys. These topics contain information, which is not readily available to Ansys users through standard documentation and training courses. For example, some topics provide information on Ansys capabilities that are under development or are not documented.

Fracture Mechanics Webinar: Gain Insight Into Structures with Cracks with Ansys Fracture Mechanics - (April 2023)

This webinar, conducted on April 28, 2023, provides a brief overview of fracture mechanics and Ansys capabilities in fracture analysis. DRD discusses safe-life vs. damage tolerant design, material data acquisition, and simulation of cracks in structures. Ansys fracture capabilities include both stationary, and static and fatigue crack growth options for engineers to analyze their systems.

For a recording and the presentation slides, download [here](#). (A password is [required](#) if you have not obtained one already. Select Fracture Mechanics Webinar (April 2023) from the password topic list).

End-to-end coverage of Full Optics Portfolio is Significant

Benefits of using full Ansys optical solution

1. Best in class optical tools through product development process
2. Single point of contact for simulation support
3. Seamless workflow and simplified data transfer from photonics design and optical design to in-context system
 - Direct integrations with Multiphysics software solutions, enabling robust system design

Overview of Design Challenges & Workflow

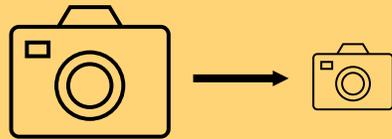

Camera Design for High Tech

Ansys

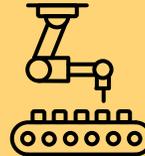

Design challenges for camera modules

Small form factor camera modules are pervasive in everyday life, from smartphones to drones to doorbells. These technologies all contain a host of high-tech optical systems and require robust imaging performance. However, to develop these solutions engineers must tackle an array of challenges, including:

Increased demand for
miniaturization

High-volume, low-cost
injection molded optics

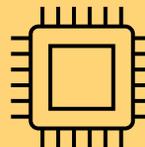

Complex lens profiles and
mounting arrangements

Wide Field of View
(FOV > 90 degrees)

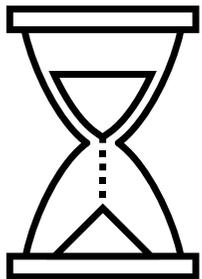

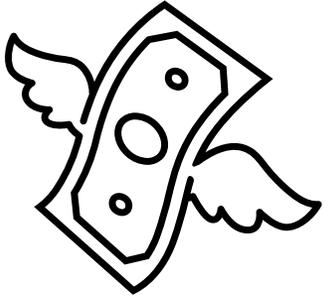

Integration with high-
resolution sensors

Internal and external
heat management

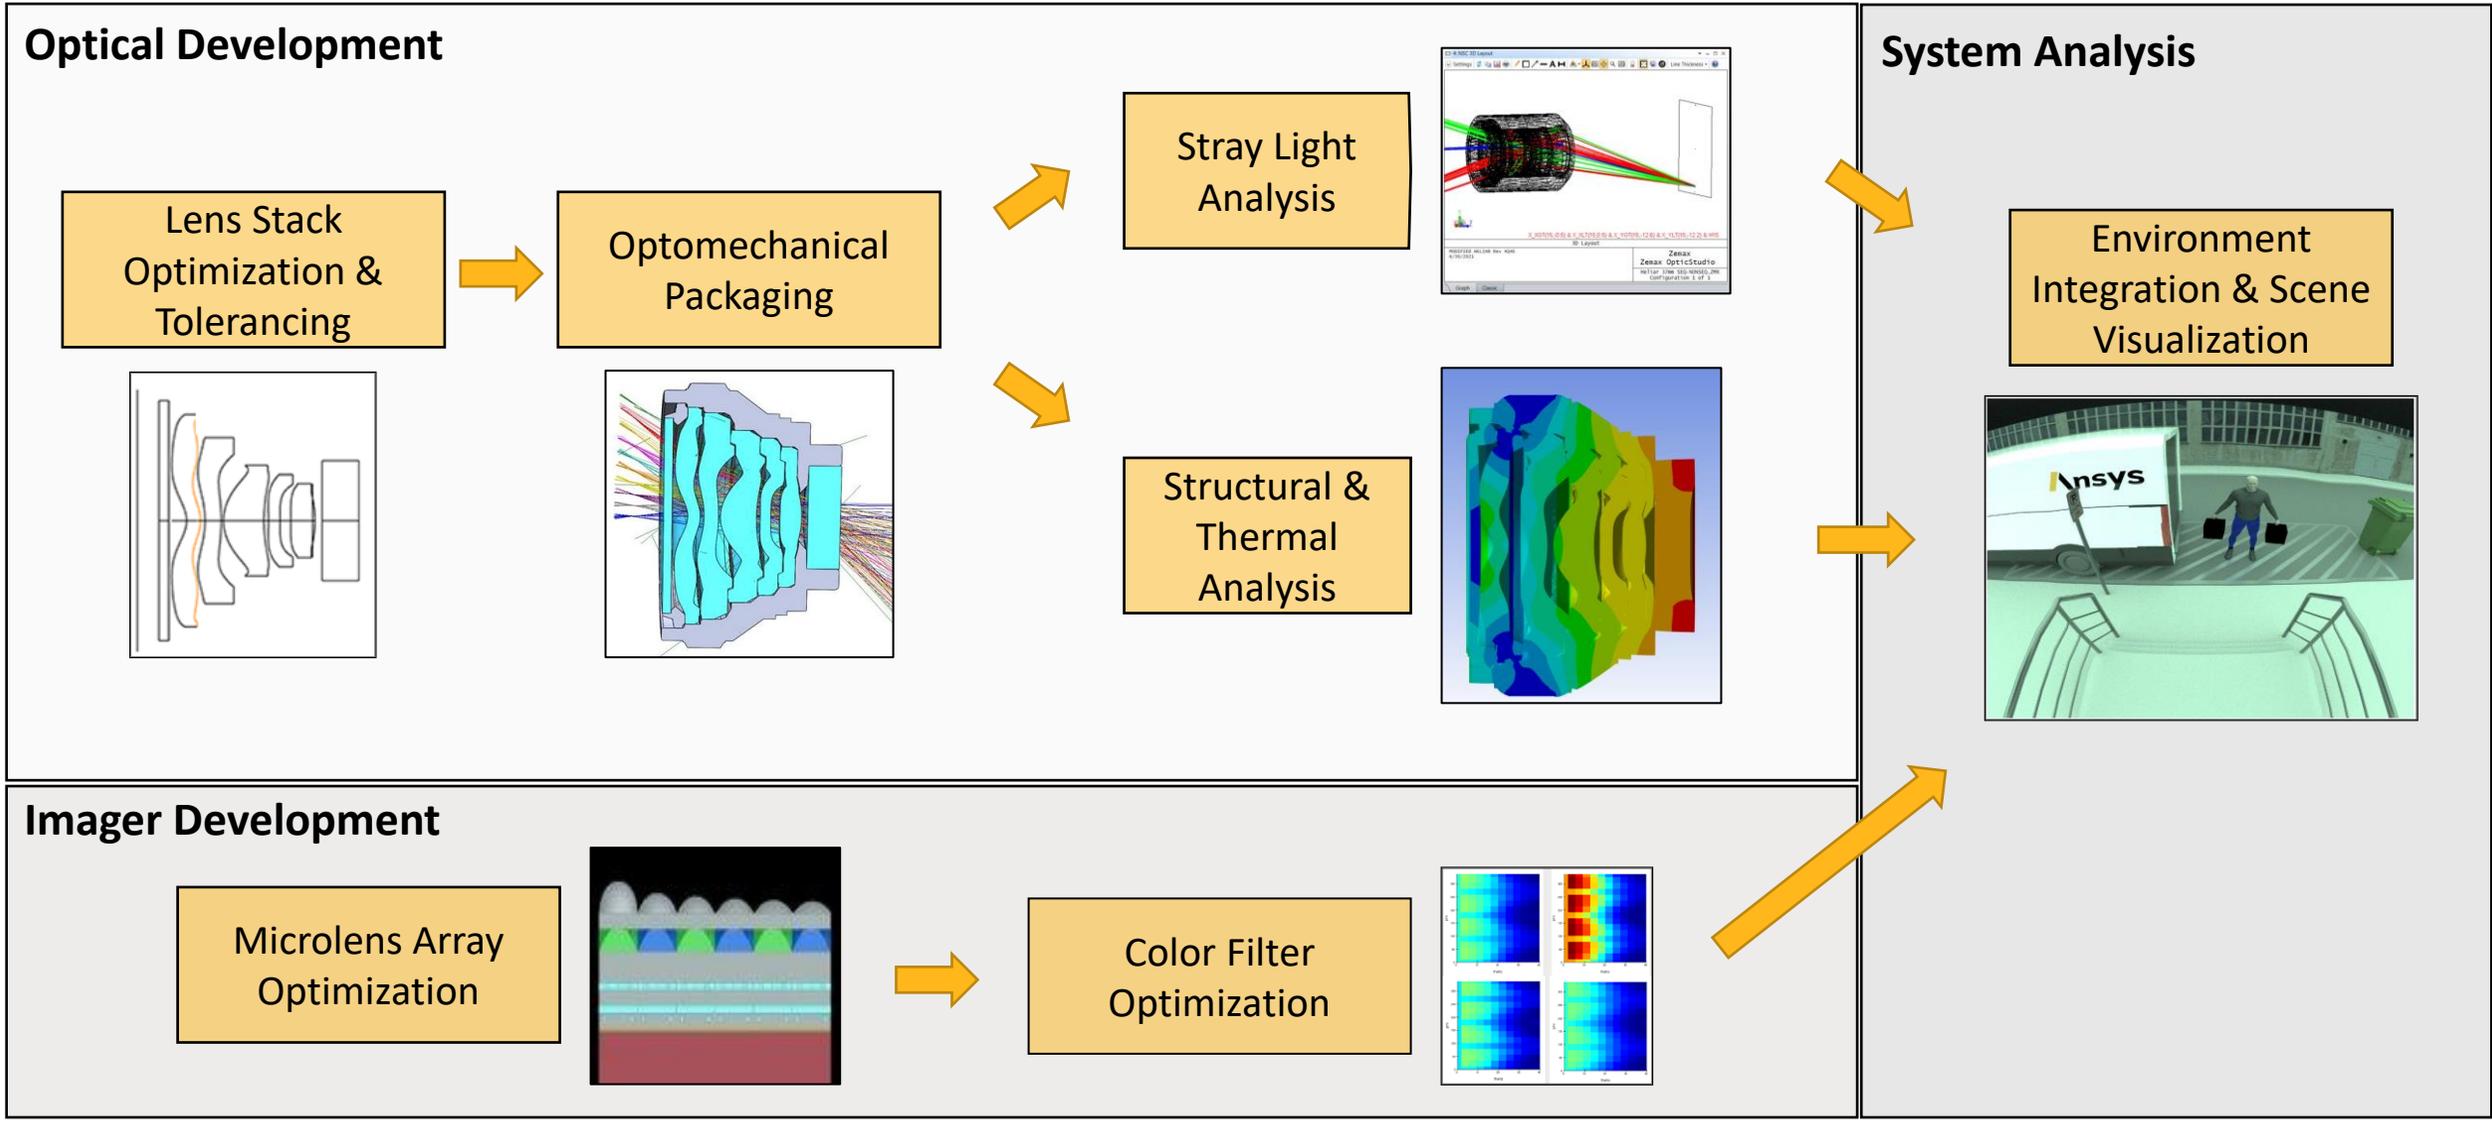

Design challenges for camera modules

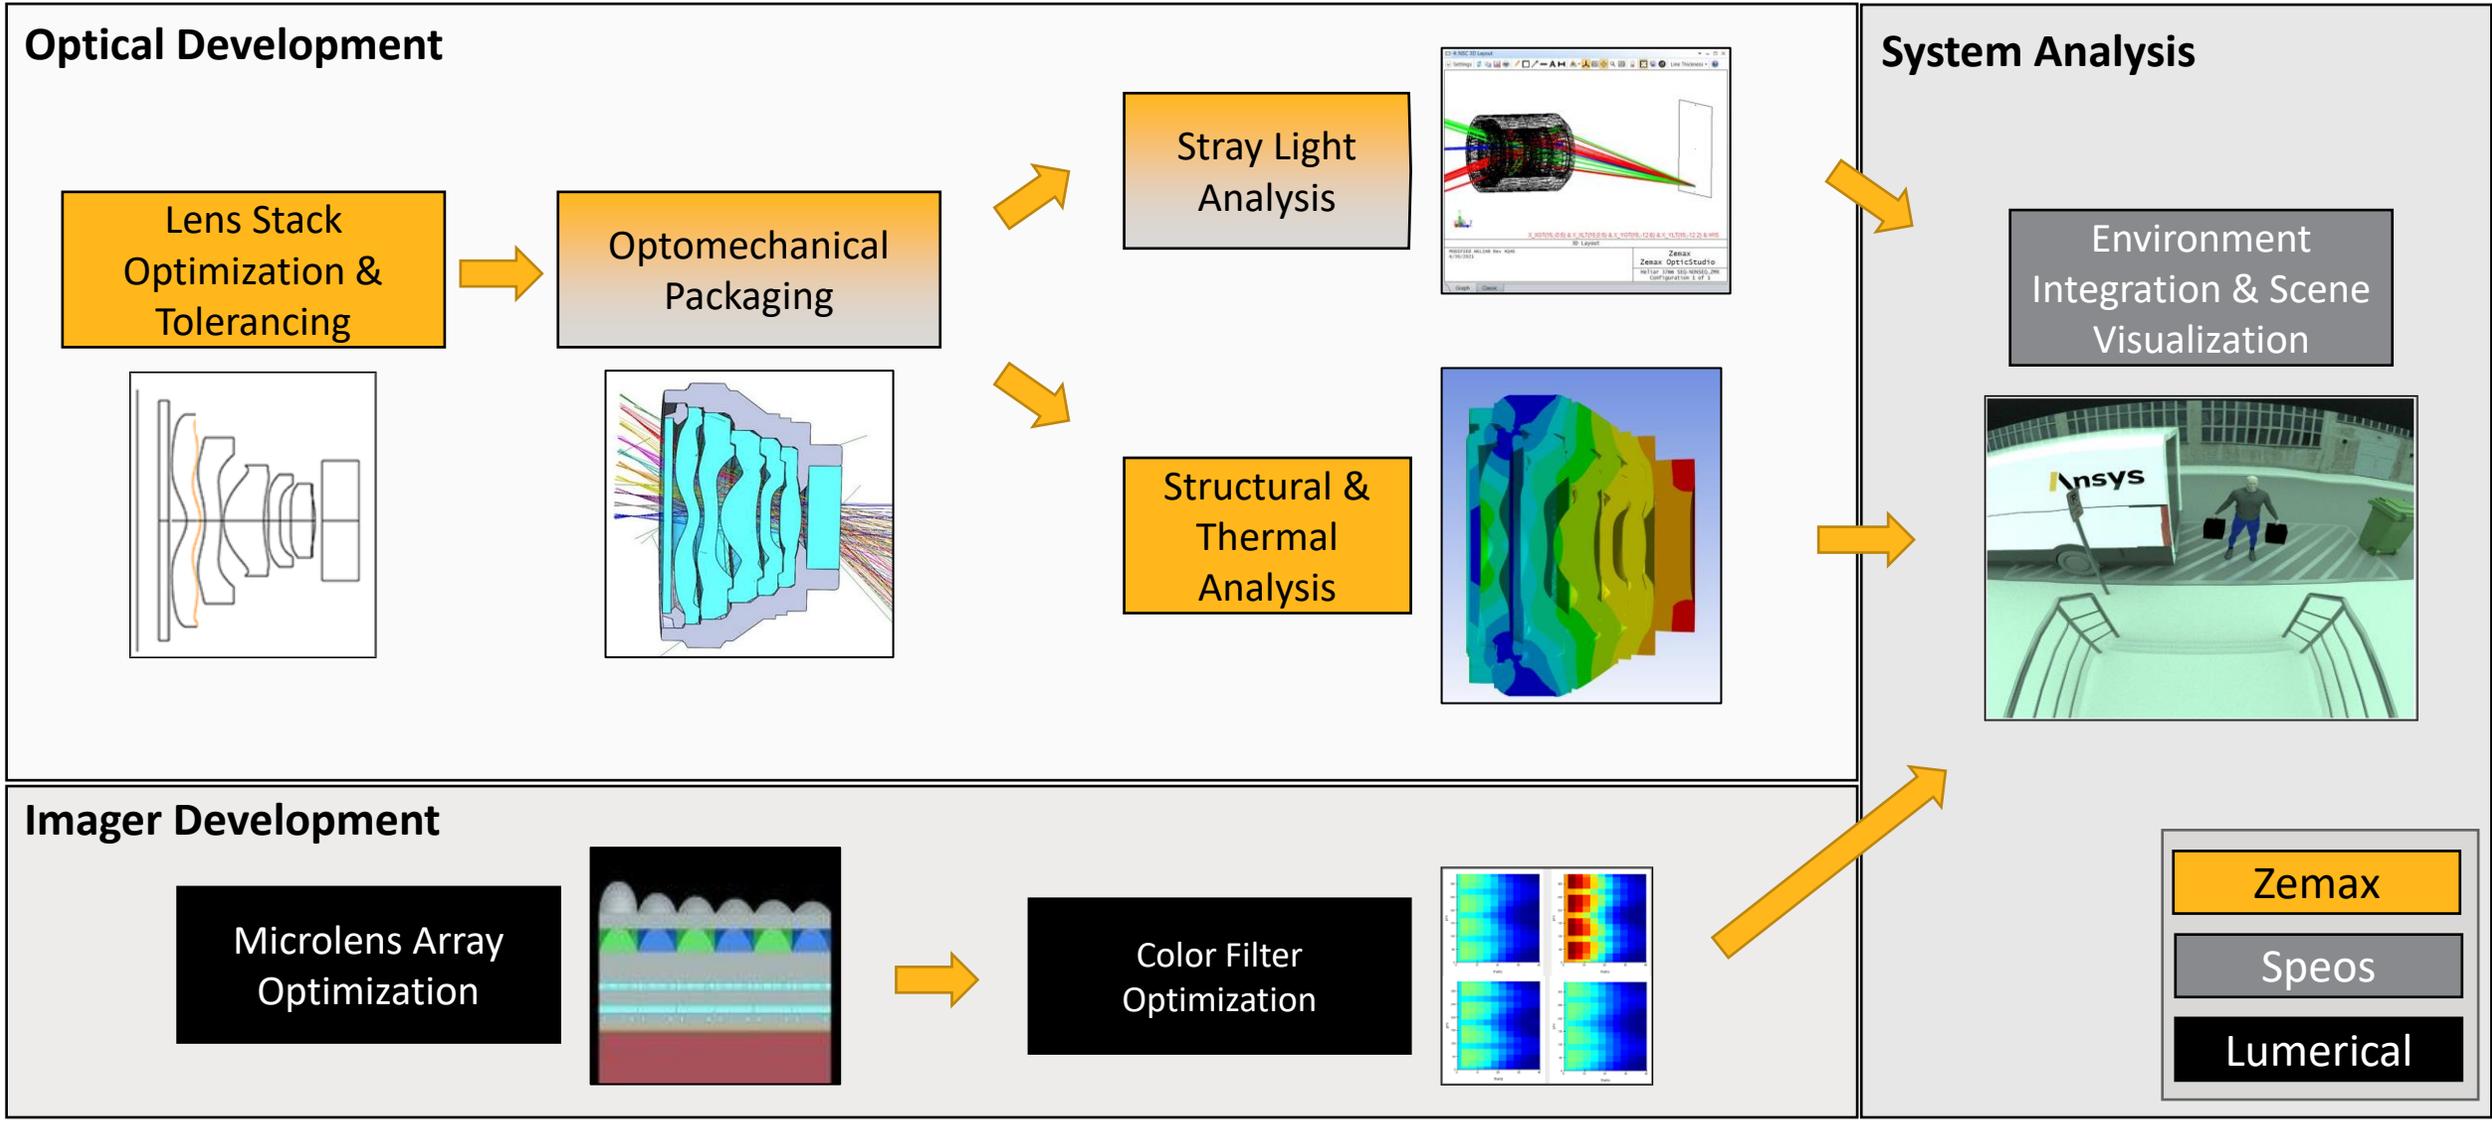

Design challenges tax engineering & development resources, increase cost, and delay time to market.

- Increasingly complex optics and packaging constraints often cause data translation and communication issues between engineering teams
- Numerous iterations due to tradeoffs between high-performance imaging and wide FOVs
- Increased pixel density requires more sophisticated optical and electrical analysis
- Severe consequences if high-volume lens manufacturing runs fail
- Late-stage error identification in physical prototypes is tedious and time consuming to address
 - Stress- or heat-induced optical performance degradation
 - Assembly misalignments
 - Sensor integration errors

Workflow

Workflow (with products)

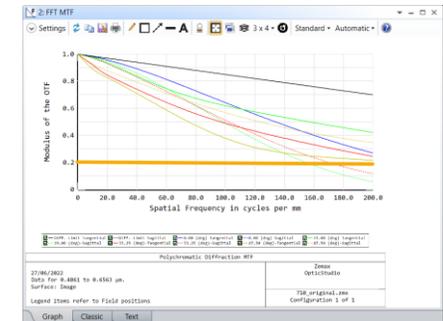

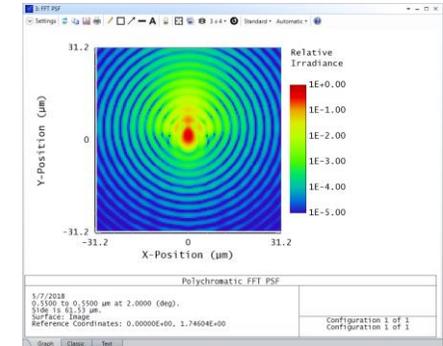

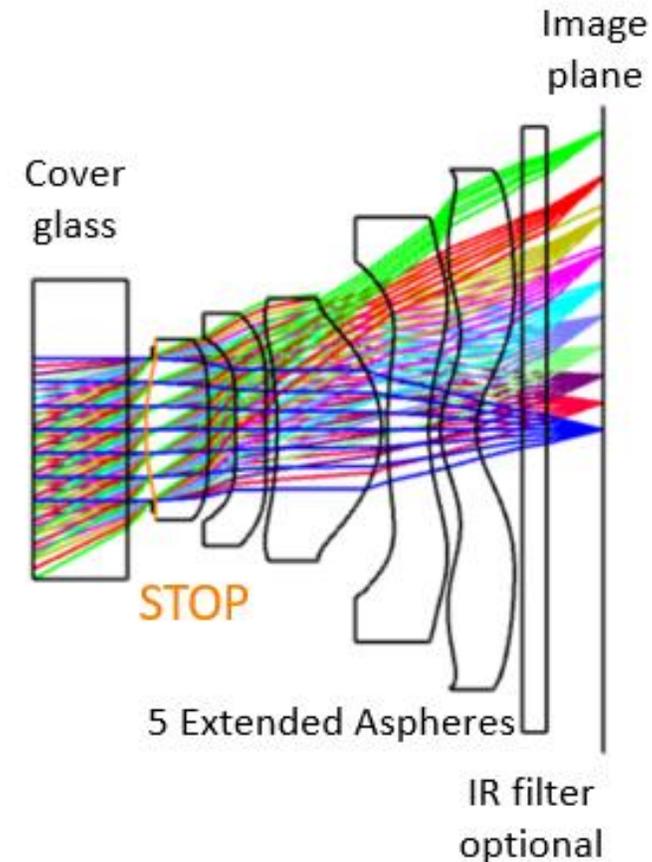

Optical Development Workflow

Ansys

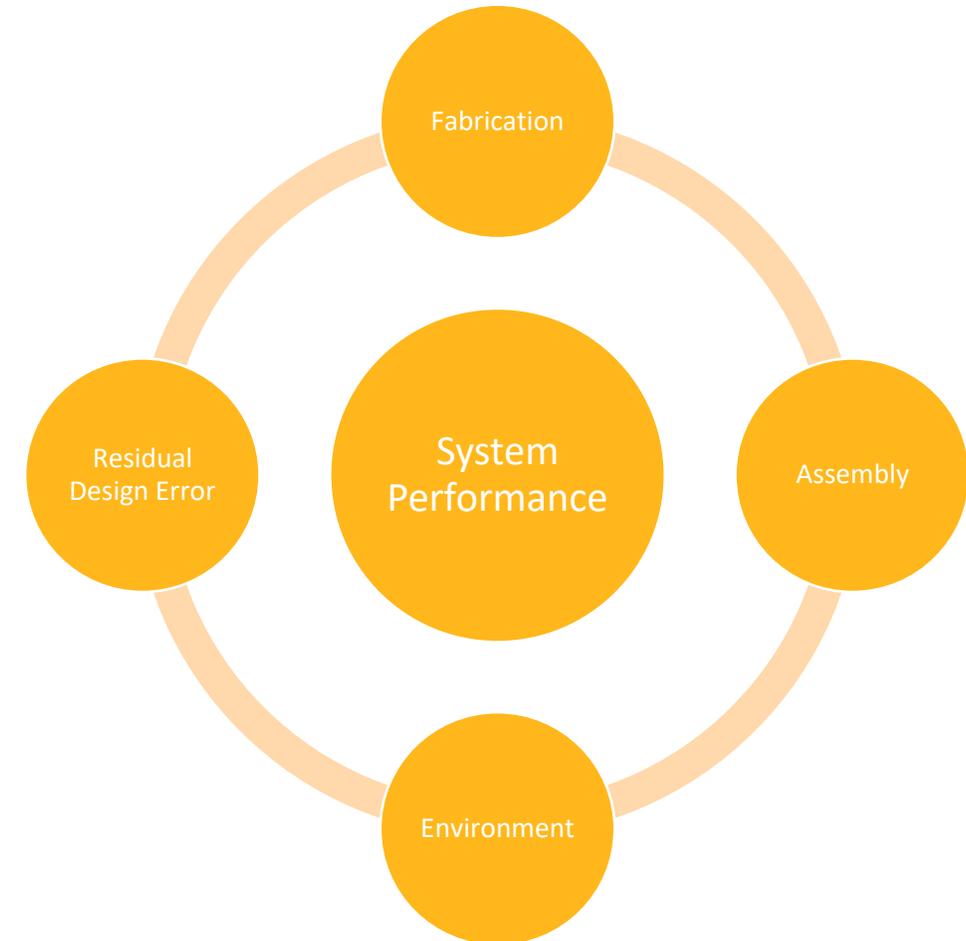

Lens Stack Optimization

- Design Templates for Starting Point Selection
- Select from glass & plastic lens materials
 - Built-in & custom defined
 - Industry standard analysis methods to track system performance
 - PSF, MTF, Wavefront Error, Relative Illumination
- Optimize for manufacturability
 - Control surface slope and system tolerances
- Automation via ZOS-API
 - Connections with Matlab, Python, Mathematica

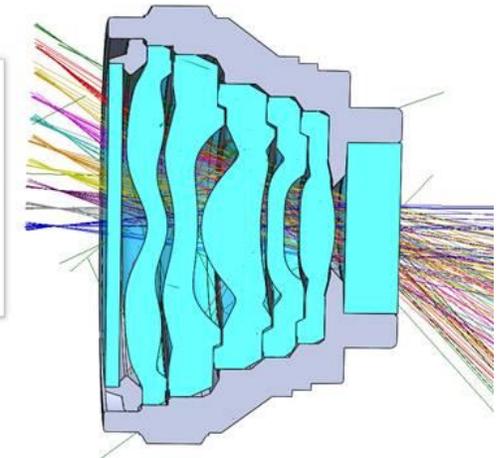

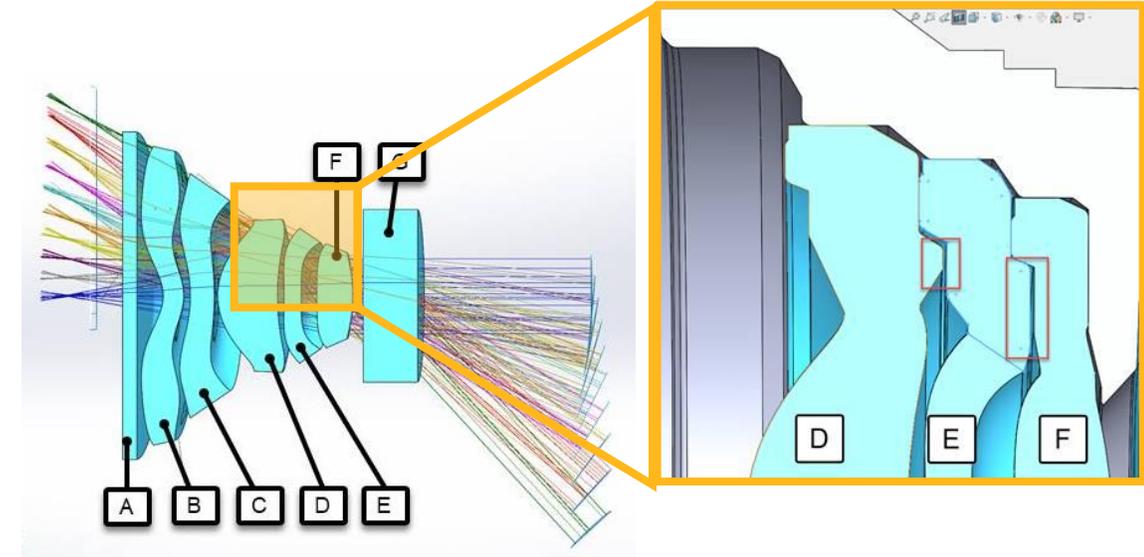

Lens Stack Tolerancing

- Introduce real-world manufacturing & assembly defects to determine optical performance degradation
- Evaluate the manufacturing tolerances to estimate the expected change in performance
 - Optical & Mechanical
- Types of available analyses:
 - Sensitivity & Inverse Sensitivity (Worst Offenders)
 - Monte Carlo (Manufacturing Yield)
- Flexible evaluation metrics, including...
 - Wavefront error
 - MTF
 - Boresight
 - User Defined

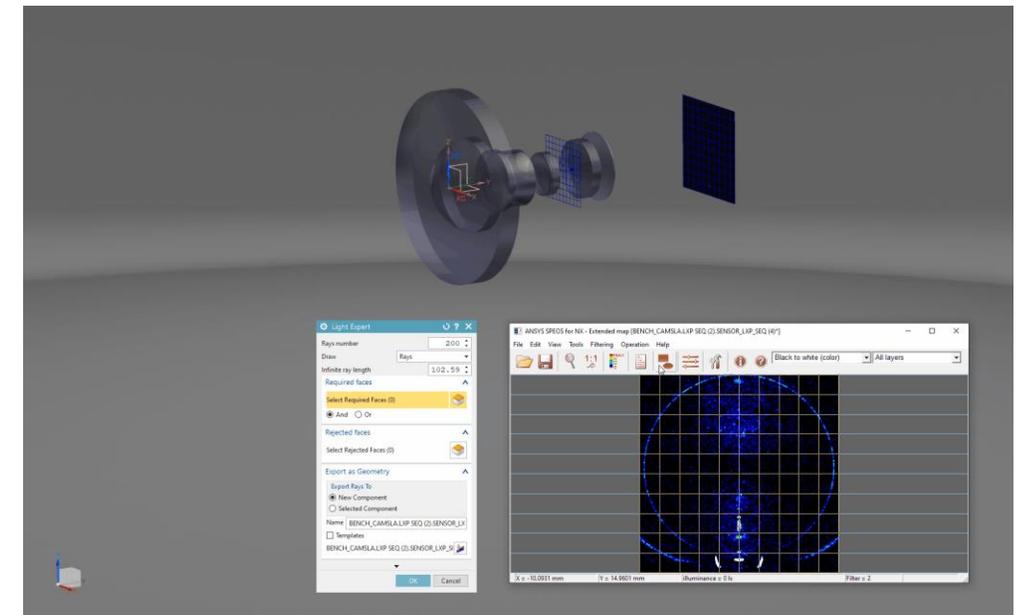

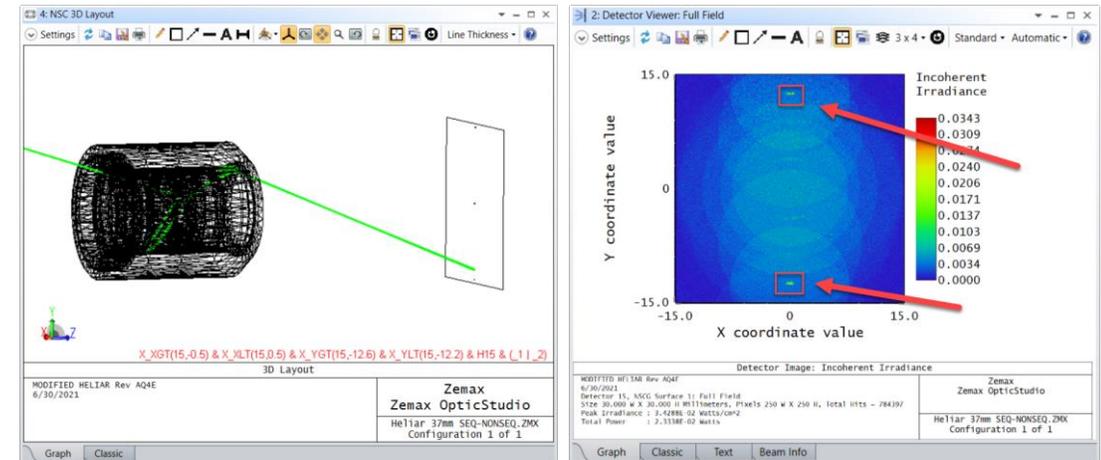

Optomechanical Design

- Seamlessly transition optical design specification to CAD environment, including:
 - Lens geometry
 - Material definitions
 - Light sources
 - Sensor positions
- Incorporate or design mounting structures
 - Mechanical housings
 - Complex lens edges
- Consider impact of both optical and mechanical components while evaluating optical performance metrics

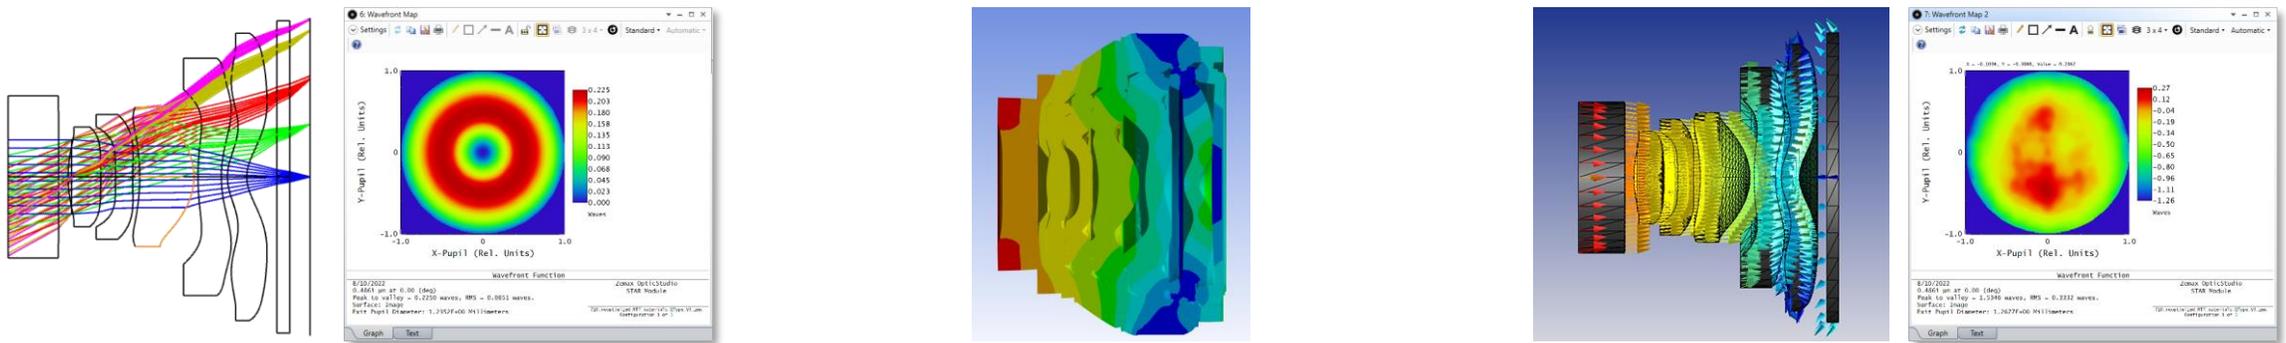

Stray Light Analysis

- Identify stray light paths while considering both optical and mechanical components.
 - Ghost Images
 - Ray sequences
 - Noise Paths
- Visualize specific ray paths with layout tools
- Analyze energy contribution of different paths/sequences
- Separate sequences with layers on sensors
- Quantify the image deterioration contributor

Structural Thermal Optical Performance

1. Perform nominal optical system design in OpticStudio
2. Send to CAD to incorporate optomechanical system design
3. Send to FEA to apply structural and thermal loads (surface deformation & thermal index variation)
4. Import deformed system to OpticStudio to analyze optical performance.

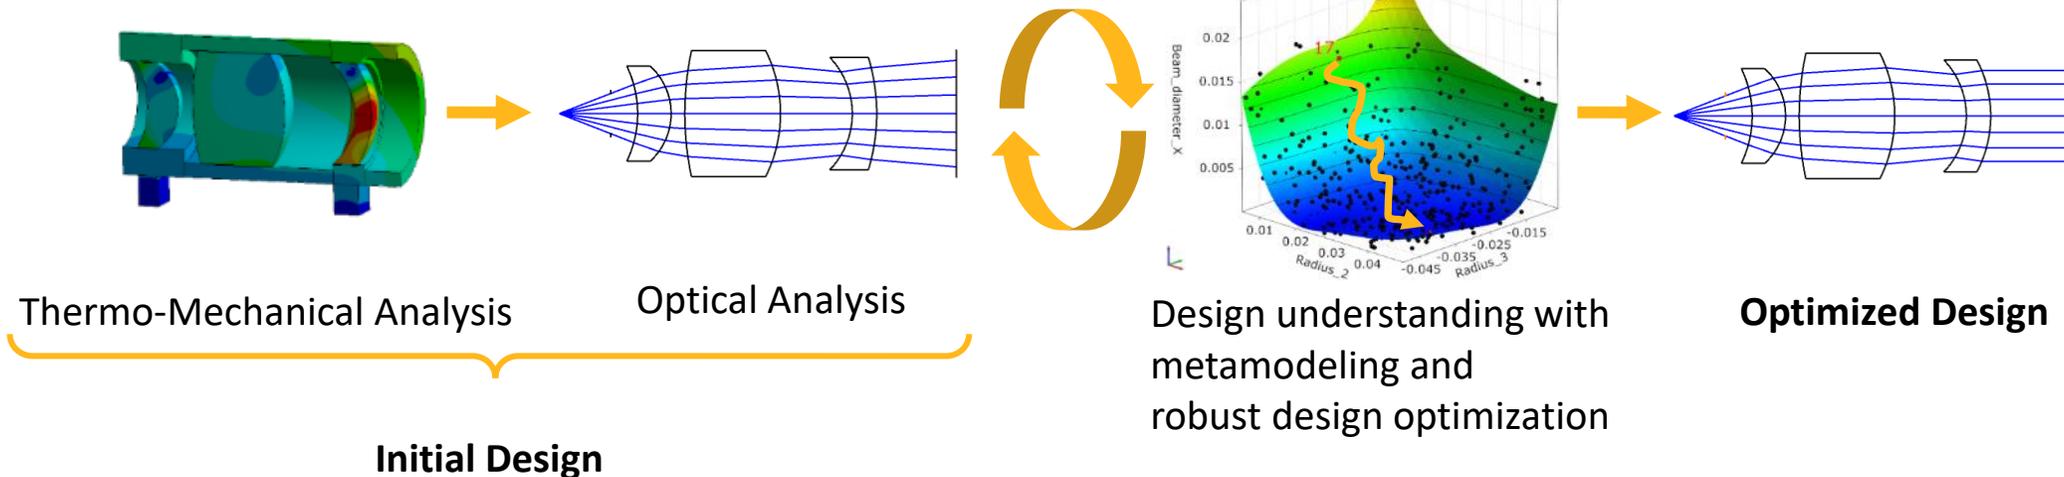

- **Workflow Automation**

- Integration optical and mechanical simulation tools in Ansys optiSLang
- Built complex workflows

- **Robust Design Optimization**

- Sensitivity Analysis
- Optimization
- Robustness Analysis

Image Processing

Speos Sensor System Exporter is a dedicated tool summoned at the end of a Speos simulation.

It converts photons into an image through the sensor and processing parts of the camera's acquisition chain.

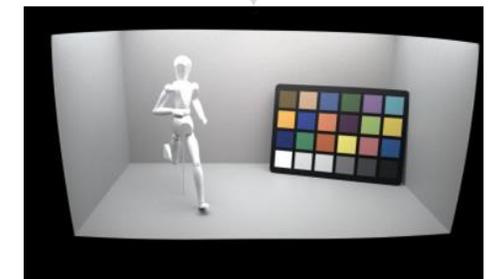

Processing part can be linked to a third party from sensor suppliers.
